FLOODPLAIN DEVELOPMENT PERMIT FOR AGRICULTURAL FENCING

This form is intended to permit fencing across streams in the FEMA designated 100 year floodplain. In order to qualify for this standard permit, the applicant must agree that any fencing installed across a stream in the floodplain will be constructed to breakaway design standards to permit the passage of floodwaters and debris during peak flow conditions. Alternative fences that might block floodwaters or debris must file with Albemarle County for a Floodplain Development Permit.

*****Please include a map or sketch indicating the locations of any proposed fencing across a stream channel.*****

I agree to install breakaway fencing for any stream crossings of fences in designated floodplains. In the event that an emergency repair is necessary, I agree to use breakaway construction, and to notify the County of the location of any new fencing across a stream channel in floodplain within one week after the repair has been made.
